Subject Index

L = Letter

A

AAA motif, ATPases 89
acid resistance, *Staphylococcus aureus* 459
ACR genes 210
actin
  in cell invasion 62, 309
  reorganization by SipA 309
Actinobacillus actinomycetemcomitans 293
N-acyl homoserine lactones (AHLs) 396
adaptation, environmental
  see environmental adaptation
adaptive mutagenesis 397
adenoviruses, CpG motifs 64 (L)
adenylate cyclase, *Bordetella pertussis* 172, 341
adhesion (adherence)
  blocking *Staphylococcus aureus* 140 (L), 141 (L)
  to cellulose 275
  mechanisms 187
  molecules, in HIV attachment 146
  RTX toxins 358
  S-layer function 258
ADP-ribosyltransferases 418
age-specific contacts, in spread of airborne infections 373
aging, yeast 247
airborne infectious diseases, spread 372
allelic profile 483
amoebae
  prokaryote interactions 48, 96, 98
  see also Entamoeba histolytica
amebiasis 471
amino-terminal nucleophile (Ntn) hydrolases 89
anaerobic eukaryotes, hydrogenosomes 441
animal models
  Bartonella infections 227
  hepatitis C virus infection 404
  melioidosis 139
  neurotropic viral infections 157
antenna, *Rhodobacter sphaeroides* 435
anthrax 180
  toxin 342
antigenic variation, mycoplasma lipoproteins 497
antimicrobials
  apicomplexan parasite killing 329
  arsenical 207
  bacteriocins 129
  resistance *see* drug resistance
antiretroviral drugs, HIV resistance 120, 302
antisense technology
  Entamoeba histolytica studies 471, 473
  meq transcripts 24
aphids, luteovirus transmission 74, 346 (L)
apicomplexan plastids (apicoplasts) 266 (L), 267 (L), 328
apoplastic phloem loading 237
apoptosis
  in antibacterial defense 59
  influences of viruses 155, 160, 169
  neuronal, in viral infections 155
  RTX-toxin-mediated 359
arabinose (Ara) assimilation, *Burkholderia pseudomallei* 138
ArcAB phosphorelay system 118
Archaea
  citric-acid cycle 287
  gene transfer systems 212
  S-layers 213, 253
arginine-rich motifs (ARM), RNA-binding proteins 136
arsenate reductase 210
arsenic
  resistance operons 207
  transporters 207
arsenical drugs, *Trypanosoma brucei* resistance 469
arthropod-borne viruses 71, 346 (L)
ATP-binding cassette (ABC) transporters 203, 211
ATP synthesis, in hydrogenosomes 441
ATPases
  AAA motif 89
  SecA 315
attachment receptors, HIV-1 144
Atx1p 502
autoimmunity
  endogenous retroviruses and 354, 430 (L)
  multiple sclerosis and 476

B

bacillary angiomatosis 226
bacillary peliosis hepatitis 226
bacille Calmette–Guérin (BCG) vaccine 394
Bacillus anthracis, pathogenesis 180
Bacillus stearothermophilus, S-layer 255
Bacillus subtilis
  arsenic resistance 209
  survival strategies 201
  two-component system 116, 201
bacteriochlorophyll 435
bacteriocins, in bacterial competition 129
barley yellow dwarf virus (BYDV) 346 (L)
barophiles 447
Bartonella, as emerging pathogens 226
Bcl-2
  in neuronal cell death 156
  viral homologs 163, 169
biofilms
  as microbial reservoirs 46, 97
  virulence mechanisms and 96
bioinformatics 229, 321
biological control, plant pathogens 379
bioluminescence, in squid 414
bioterrorism 181
Bordetella pertussis
  adenylate cyclase 172, 341
  two-component system 116
bovine papillomavirus (BPV) E5 protein 454
Braun's lipoprotein 494
Brucella suis, chromosomes 224
Brugia, TGF-β expression 232
Brugia malayi, genome 11
Buchnera 74, 346 (L)
bunyaviruses, transmission by arthropods 73
Burkholderia pseudomallei 138
BvgAS phosphorelay system 118

C

Caenorhabditis elegans
  genome 11
  longevity 251, 270 (L)
cag pathogenicity island 182
calmodulin (CaM), CyaA activation 172
caloric restriction, longevity and 251, 270 (L)
Campylobacter fetus, S-layer 257
Campylobacter jejuni
  cytolethal distending toxin 292
  genome 228
cancer
  and viruses 269 (L)
  see also oncogenesis
Candida albicans, morphogenesis 333
canonical translation initiation factors 78
capsid proteins, arthropod-borne viruses 73
capsular polysaccharide, group A *Streptococcus* 428
carbon metabolism, in hydrogenosomes 444
caspases, in neuronal cell death 155
Castleman's disease, multicentric 196, 310 (L)
cat scratch disease (CSD) 226
catalases, bacterial 417, 459
cauliflower mosaic virus (CaMV) 73
CCR5, in HIV attachment 145
CCSp 502
CD1 molecules 13 (L)
CD4, HIV attachment 144
$CD4^+$ T cells, in mycobacterial infections 366, 477 (L)
$CD8^+$ T cells, epitope delivery by CyaA 174
CD14, in Gram-positive septic shock 101
cdc2-related kinases, leishmanial 83
cdt genes 294
cell–cell signaling, *Bacillus subtilis* 203
cell cycle
  block, cytolethal distending toxin 292
  Candida albicans morphogenesis and 336
cell death
  programmed *see* apoptosis
  RTX-toxin-mediated 359
cell entry/invasion
  arthropod-borne viruses 73
  CyaA toxin 172
  HIV-1 144

influenza virus 99
mechanisms 62, 187
Mycobacterium leprae 185
Salmonella 55, 62, 309
Shigella 310
TGF-β and 232
cell lysis
in antibacterial defense 59
by CyaA toxin 173
cell polarity, *Candida albicans*
morphogenesis and 336
cell receptors
arthropod-borne viruses 73
HIV-1 144
picornaviruses 77
RTX toxins 358
cell tropism *see* tropism
cellular microbiology 187
cellulases 275
cellulose-binding factor (CBF) 275
cellulosome 275
central nervous system (CNS), prion
transport to 465
chaperone/usher pathway 4, 6
chaperones
copper, in yeast 502
Sec pathway 315
chemicals, bacterial resistance 410
chemokine receptors, in HIV
attachment 145
chemotaxis 16
Bacillus subtilis 204
signal transduction 1, 16
chestnut blight 379
CheY 1, 16
chikungunya virus (CHIK) 74
chimpanzee, hepatitis C virus
infection 404
Chlamydia pneumoniae, multiple
sclerosis and 476
Chlamydia trachomatis, Coxiella burnetii
similarities 152
chloride channel 55, 56
cholera 391
CFTR ΔF508 mutation and 55, 56,
58
see also Vibrio cholerae
chromosome, bacterial 223
chytrids, anaerobic 441
circumsporozoite protein (CS) 135,
137
citric-acid cycle (CAC) 281
Cla4p 337
clonal groupings, *Helicobacter pylori*
184
Clostridium perfringens
enterotoxin (CPE) 104
toxinotype and genotype 104
toxins 104
Clostridium thermocellum 275
Clp proteins, *Bacillus subtilis* 203
ClpP 89
CmPP16 239
co-suppression 353
coat proteins, virus, in phloem
transport 238
codon bias 306
cohesin domains 275
colicins, in bacterial competition 129
ComP/ComA system 202
companion cells (CCs) 237, 312 (L)
conjugation, in Archaea 217
contact patterns, in spread of airborne
infections 372
cooperativity, in chemotaxis signal
transduction 1
copper (Cu), uptake and distribution
in yeast 500
Cox17p 502
Coxiella burnetii, developmental
biology 149
cpe gene, *Clostridium perfringens* 104
CpG DNA 64 (L)
Cph1p 334
crossreactivity, immunological 390
Cryphonectria hypovirus 1 (CHV1)
379
crypton 427
CsrB RNA 37
CsrR/CsrS 428
Ctr1p/Ctr3p 500
CTXΦ receptor 391
cucumber mosaic virus 239
CXCR4, in HIV attachment 146
CyaA (adenylate cyclase) 172, 341
cyclic AMP (cAMP), CyaA-induced
elevation 172
cysteine proteases (proteinases)
Entamoeba histolytica 471, 473
trypanosomatids 86
cystic fibrosis 55, 56
cystic fibrosis transmembrane
conductance regulator (CFTR),
ΔF508 mutation 55, 56, 58
cytochrome bc_1 complex, *Rhodobacter*
sphaeroides 435
cytokines
in Gram-positive septic shock 100
in *Histoplasma capsulatum* infection
69
in mycobacterial infections 366,
477 (L), 478 (L)
signaling, virus interception 166
cytolethal distending toxin (CDT)
family 292
cytoplasmic incompatibility (CI) 298
cytotoxic T lymphocytes (CTLs)
in antibacterial defense 59
in hepatitis C 402

D

daf genes 251, 270 (L)
dam-directed mismatch repair
(DDMR), in *Escherichia coli* 29
death receptors, viral usage 162
deep-sea microorganisms 447
DegS/DegU system 202
Deinococcus radiodurans, radiation
resistance 362
desiccation tolerance, *Staphylococcus*
aureus 460
developmental stages, bacterial 396
diarrhea, CFTR ΔF508 mutation and
55, 56, 58
DicF RNA 37
differentiation
bacterial 396
Vibrio fischeri in squid light organ
415
dihydrofolate reductase-thymidylate
synthase (DHFR-TS) 83
dinoflagellates 267 (L), 268 (L)
diphtheria toxin 341
disinfectants, bacterial resistance 412
DNA-binding proteins, H-NS and
StpA 124
DNA damage
in *Helicobacter pylori* 490
tolerance of radiation-induced 362
by toxic electrophiles 242, 346 (L)
DNA degradation, in *Deinococcus*
radiodurans 364
DNA polymerase, mutator genes 29
DNA repair
defects, *Escherichia coli* 29
in *Deinococcus radiodurans* 362
in *Helicobacter pylori* 490
DNA strand compositional
asymmetry 305, 308
DNA supercoiling, temperature-
dependent changes 425
dockerin domains 276
Dps 246
Drosophila, Wolbachia infection 298
drug resistance 344
genes, *Vibrio* integron 93, 95
HIV 120, 302
markers, Archaea 214
multiple, *mar* regulon 410
in *Trypanosoma brucei* 469
drug targets
apicomplexan plastids as 328
trypanosomatids 82
DsrA RNA 37
Dutch elm disease 379
dystroglycan, in leprosy 185

E

Efg1p 335
electron transfer, photo-induced cyclic
435
electrophiles, toxic 242, 345 (L),
346 (L)
electrophoresis
2-D gel 325
multilocus enzyme (MLEE) 482
emerging pathogens 97, 226
zoonotic viruses 389
encephalitis, viral 157
endocarditis, *Bartonella* 226
endogenous macromolecules, phloem
transport 237
endogenous retroviruses (ERVs)
human *see* human endogenous
retroviruses
multiple sclerosis and 263
pathogenic potential 350, 430 (L),
431 (L)
endoplasmic reticulum (ER), in viral
infections 163
endosomes *see* lysosomes;
phagolysosomes; phagosomes
endospores, *Bacillus anthracis* 180
endosymbioses 328, 426
bacteria–protozoa 96
secondary 266 (L), 267 (L), 328
in virus transmission by arthropods
75
endothelial cells, Kaposi's sarcoma-
associated herpesvirus infection
200
Entamoeba histolytica
antisense studies 471, 473
evolution 426
prokaryote interactions 97
Enterobacteriaceae, *mar* regulon 410
environmental adaptation
Bacillus subtilis 201
Candida albicans 333
colicins and 129
mycoplasmas 498
regulatory networks 320

EnvZ 423
epidemics, new zoonotic viruses 389
epidemiology
  molecular 482
  spread of airborne infections 372
epidermal growth factor receptor (EGFR), as viral oncoprotein target 453
Epstein–Barr virus (EBV), LMP1 protein 455
v-ErbB 454
erythrophagocytosis, by *Entamoeba histolytica* 472
Escherichia coli
  adaptive mutagenesis 397
  arsenic resistance 208
  Braun's lipoprotein 494
  chemotaxis 1, 16
  chromosome 224
  colicins 129
  cytolethal distending toxins (CDT) 292
  electrophile-protective mechanisms 242, 345 (L), 346 (L)
  enteropathogenic (EPEC) 62, 341, 343
  mar regulon 410
  mechanosensitive channels 420
  mutator genes 29
  nucleoid-associated proteins 124
  proteasomes 89
  Sec pathway 315
  small RNAs 37
  tellurite resistance 111
  two-component system 116
  uropathogenic 193
EspD 341, 343
eukaryotic microorganisms
  Entamoeba histolytica and 426
  hydrogenosomes 441
Euprymna scolopes, *Vibrio fischeri* association 414
EvgAS phosphorelay system 119
evolution
  apicomplexan plastids 266 (L), 267 (L)
  arsenical resistance 209
  bacterial pathoadaptive 191, 271 (L), 272 (L)
  CFTR ΔF508 mutation 55, 56, 58
  citric-acid cycle 287
  colicins 131
  DNA switches 426
  drug resistance 120, 345
  Entamoeba histolytica 426
  Helicobacter pylori 182
  hydrogenosomes 441
  Kaposi's sarcoma-associated herpesvirus 199
  quasispecies, in viruses 403
  symbioses 97
  two-component systems 119
  Vibrio cholerae 94
  virulence, contact networks and 375
  Wolbachia in insects 297
expressed sequence tags (EST), parasites 10
extracellular sensors 345 (L)

F

fibronectin, blocking *Staphylococcus aureus* binding 140 (L), 141 (L)
fimbriae, type I 187, 193
fitness, viral, and quasispecies 403
flagella
  secretion of protein components 4
  switch in direction of rotation 16
flagellin, *Burkholderia pseudomallei* 139
FliM protein 17
food poisoning, *Clostridium perfringens* 104
4.5S RNA 37
fungi
  drug resistance 344
  dsRNA viruses 377
  host defense 67
furin 99

G

G2 phase block, by cytolethal distending toxin 292
Gal/GalNAc-specific lectin 472, 474
gangrene 104
gastrointestinal disease
  CFTR ΔF508 mutation and 55, 56, 58
  Clostridium perfringens 104
GC skew 305, 308
gene
  capture, in *Vibrio cholerae* 93, 95
  density, GC bias and 305, 308
  displacement, citric-acid cycle 288
  expression, thermal control 425
  fusions 323
  highly expressed 307
  inhibition, in *Entamoeba histolytica* 471, 473
  orientation bias 306
  repression, by viruses 167
  sequence diversity, in *Helicobacter pylori* 488
  silencing, in yeast aging 248
  targeted disruption, trypanosomatids 83
gene chips (DNA microarrays) 229, 323, 398 (L)
gene therapy, CpG-mediated immune stimulation 64 (L)
gene transfer 397
  horizontal 191, 224
  systems for Archaea 212
general stress response (GSR) 46
  Bacillus subtilis 203
genetic stability, yeast longevity and 248
genetic variability
  Helicobacter pylori 488
  hepatitis C virus 402
  genome/genomics 228
  apicoplasts 329
  bacterial chromosomes 224
  Bartonella 227
  Burkholderia pseudomallei 140
  Campylobacter jejuni 228
  citric-acid cycle (CAC) 281
  comparative 228, 281
  Deinococcus radiodurans 364
  functional 229
  Helicobacter pylori 184, 228, 488
  intrastrand asymmetry 305
  Mycobacterium tuberculosis 229, 394
  parasites 10
  sequence information 321, 398 (L)
  Treponema pallidum 8, 224
  in vaccine development 394
genotyping, *Clostridium perfringens* 104
germ cells, endogenous retroviruses 352
germination, *Bacillus anthracis* spores 180
glutathione 244
glycine-rich proteins, *Mycobacterium tuberculosis* 394
glycosyl hydrolases 275
glycosylation, S-layers 257
glycosylphosphatidylinositol (GPI) anchors 63
gp120
  in HIV attachment 144
  induction of apoptosis 161
granulomas
  in mycobacterial infections 368, 477 (L), 478 (L)
  TGF-β and 235
granulysins, microbial killing by 59
green fluorescent protein (GFP) 240, 312 (L)
GroEL 74, 346 (L)
groundnut rosette virus 239
growth
  in biofilms/intracellular 47
  methodology, Archaea 213

H

H-NS 124, 425
Haemophilus ducreyi, cytolethal distending toxin 293
halide peroxidase (HPO), squid 417
halophiles, gene transfer systems 213
HBVx protein 455
heat-shock protein 60 (Hsp60), *Entamoeba histolytica* 427
heat-shock response
  DNA switching mechanisms 425
  Staphylococcus aureus 462
heat stress, in yeast 250
Helicobacter pylori
  evolution 182
  genome 184, 228, 488
  origin of genetic variability 488
  plasticity zone 184, 225
helper factors, arthropod-borne viruses 73
hemagglutinin (HA), influenza virus 99
hemolysins 356
heparan sulfate proteoglycans (HSPG), in HIV attachment 144
hepatitis B virus (HBV), HBVx protein 455
hepatitis C virus (HCV)
  E2, neutralizing antibodies 403
  hypervariable region 1 (HVR1) 402
  quasispecies 402
herbicides, apicomplexan parasite killing 329
herpesviruses, oncogenic 22
high-pressure environments 447
HilA 221, 222
histidine kinase 115, 201
histidine phosphotransfer domain (HPt) 115
Histoplasma capsulatum, host defense 67
HIV
  attachment 144
  drug resistance 120, 302
  induction of apoptosis 161
  Kaposi's sarcoma-associated herpesvirus and 196

horizontal gene transfer 191, 224
horizontal transmission, *Wolbachia* 300
host defense
Histoplasma capsulatum 67
intracellular pathogens 59
host–parasite interactions
cellular microbiology 187
cytolethal distending toxins 292
free-living protozoa 96
mycobacterial infections 366, 477 (L), 478 (L)
mycoplasmas 493
picornaviruses 77
host specificity, *Clostridium perfringens* toxinotypes 109
host trafficking interfering factors (Htifs) 468
Hq1 152
HslV 89
HU protein 127
human endogenous retroviruses (HERV) 350, 430 (L), 431 (L)
E family (HERV-E) 352
K family (HERV-K) 354
W family (HERV-W) 263
human herpesvirus 6 (HHV6), multiple sclerosis and 476
human herpesvirus 8 (HHV8)
see Kaposi's sarcoma-associated herpesvirus
human immunodeficiency virus
see HIV
human papillomavirus (HPV) E5 protein 454
human teratocarcinoma-derived virus (HTDV) 354
hyaluronic acid capsular polysaccharide, group A *Streptococcus* 428
hydrogenase 441
hydrogenosomes 427, 441
hydrostatic pressure, elevated 447
hyphal growth, *Candida albicans* 333
hypovirulence, plant fungi 379
hypoviruses 377
hypoxanthine–guanine phosphoribosyltransferase (HGPRT), trypanosomatids 86

I

ICP4 gene, Marek's disease virus homolog 27
immune evasion
cytokine-mediated pathways, by viruses 166
mycoplasma lipoproteins and 493
Plasmodium spp. 136
TGF-β and 232
in viral persistence 403
immunity protein, colicin 129
immunocompromised patients, *Bartonella* infections 226
immunomodulins, mycoplasma 495
in vivo expression technology (IVET) 386, 388
infectious agents, in multiple sclerosis 475
infectious diseases, molecular signals and 62
inflammation, downregulation by mycoplasmas 497
influenza virus, pathogenicity 99
initiation factors, picornaviruses 78
insects
transmission of viruses 71, 346 (L)
Wolbachia transmission dynamics 297
Int1p 337
integrases, *Vibrio* 93, 95
integron, *Vibrio cholerae* 93, 95
inter-strain competition, in *Wolbachia* evolution 301
interferon-γ (IFN-γ)
in *Histoplasma capsulatum* infection 69
in mycobacterial infections 366, 477 (L), 478 (L)
interferon (IFN)-stimulated genes (*ISG*), viral inhibition 166
interferons (IFNs), in virus infections 166
interleukin 10 (IL-10), in mycobacterial infections 369
interleukin 12 (IL-12), in mycobacterial infections 368
internal ribosomal entry sites (IRES), picornaviruses 78
Internet resources
multilocus sequence typing 485
Trends Online 179
intestinal environments, sensing by *Salmonella* 221, 222
intracellular pathogens
cellular microbiology 187
Coxiella burnetii 149
Histoplasma capsulatum 67
host invasion mechanisms 62
host vacuolar trafficking and 467
killing vs suicide 59
survival in protozoa 46, 96
invF 221
ion trap, S-layer function 257
iron
and Cu transport, in yeast 500
restriction, *Staphylococcus aureus* 460

J

JAK-STAT signaling pathway, virus interception 166

K

Kaposi's sarcoma 196, 269 (L), 310 (L), 311 (L)
Kaposi's sarcoma-associated herpesvirus (KSHV, HHV-8) 196, 269 (L), 310 (L), 311 (L)
KdpD 423
KefB/KefC system 244, 346 (L)
killer viruses, fungi 377
kinetoplastids, genomics 10

L

La autoantigen 79
Lactobacillus, S-layer 255
lagging strand, GC skew 305
laminin, in leprosy 185
lamivudine, HIV resistance 121
large cell variants (LCVs), *Coxiella burnetii* 150
latent infections
mycobacterial 366, 478 (L)
TGF-β and 235
leading strand, GC skew 305
lectin, Gal/GalNAc-specific 472, 474
Legionella, in protozoa 46, 96, 98
Legionella pneumophila, in biofilms 46
Leishmania, drug targets 82
Lep 316
leprosy, nerve infection 185
leukocyte recruitment, in mycoplasma infections 497
leukotoxins 357
Lewis antigens, *Helicobacter pylori* 489
light-harvesting complex, *Rhodobacter sphaeroides* 435
light organ, squid 414
linear discrimination analysis, statistical 306, 308
lipids, membrane, in piezophiles 451
